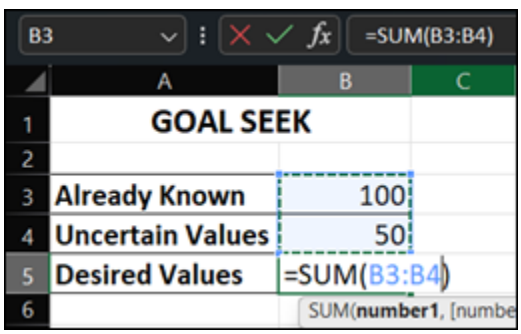
PRACTICAL 6

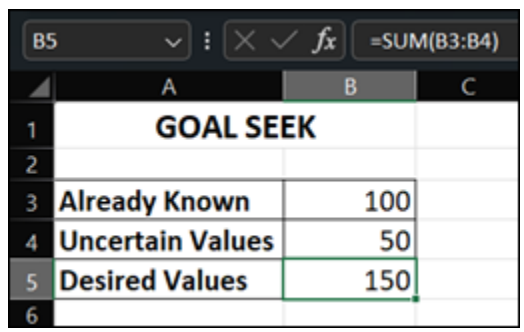
Apply the what-if for data visualization. Design And Generate Necessary Reports based on the data Warehouse Data

Steps to follow:

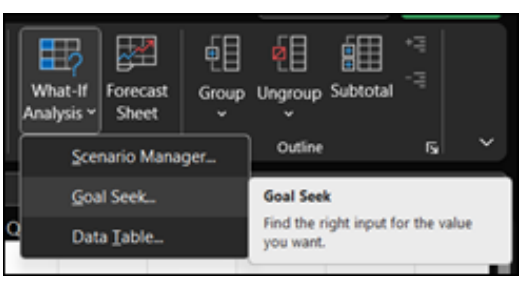
A. GOAL SEEK: Goal seek is a simple tool that lets you determine the input value needed to achieve a specific goal or target for a formula cell. It's useful when you know the desired outcome but need to figure out the input

1. Open the Excel worksheet containing the data.
2. Enter the **already known value** in one cell and the **uncertain value** in another cell.
3. In the result cell, apply the **SUM formula** to add the known and uncertain values.



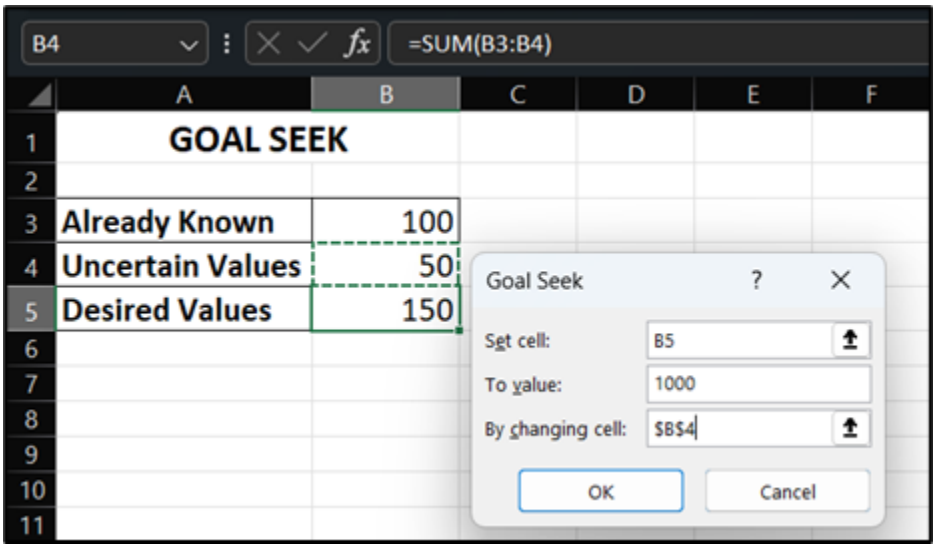


4. Go to the **Data** tab.
5. Click on **What-If Analysis**.



6. Select **Goal Seek**.

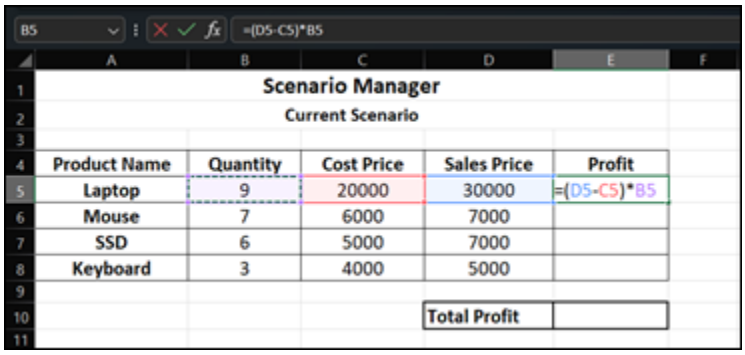
7. In the Goal Seek dialog box:
    - **Set cell**: B5
    - **To value**: 1000
    - **By changing cell**: B4



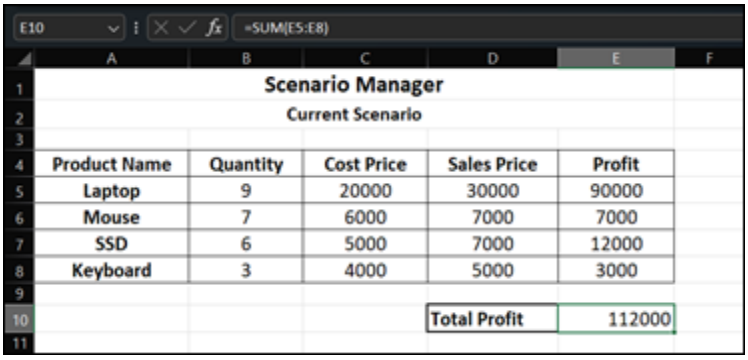
8. Click on **OK**.
9. Excel calculates the uncertain value required to get the desired result.

B. SCENARIO MANAGER: Scenario manager allows to create and save different groups of input values (scenario and see how they affect the outcome). It's ideal when you want to compare multiple what-if scenarios.

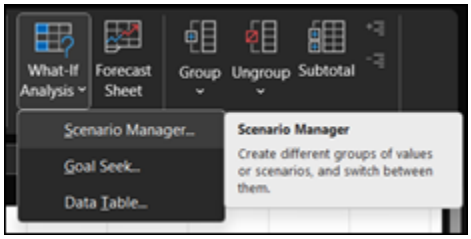
1. Open the Excel worksheet containing the data.
2. Calculate the **Profit** using Cost Price (CP), Selling Price (SP), and Quantity (Qty) with the formula



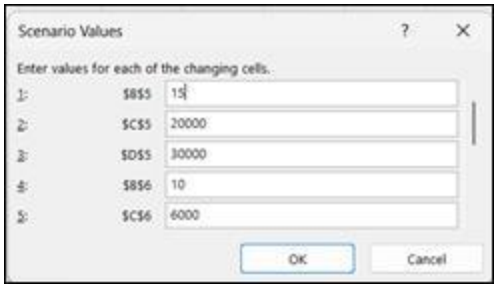
3. Use the **SUM** function to add all profit values and calculate the **Total Profit**.



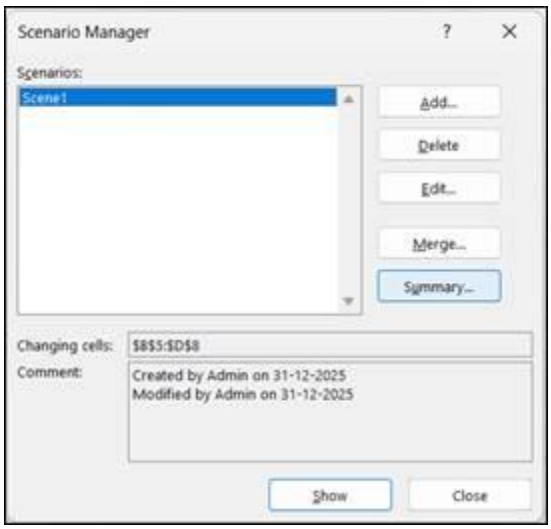
4. Go to the **Data** tab.
5. Click on **What-If Analysis** -> Select **Scenario Manager.**



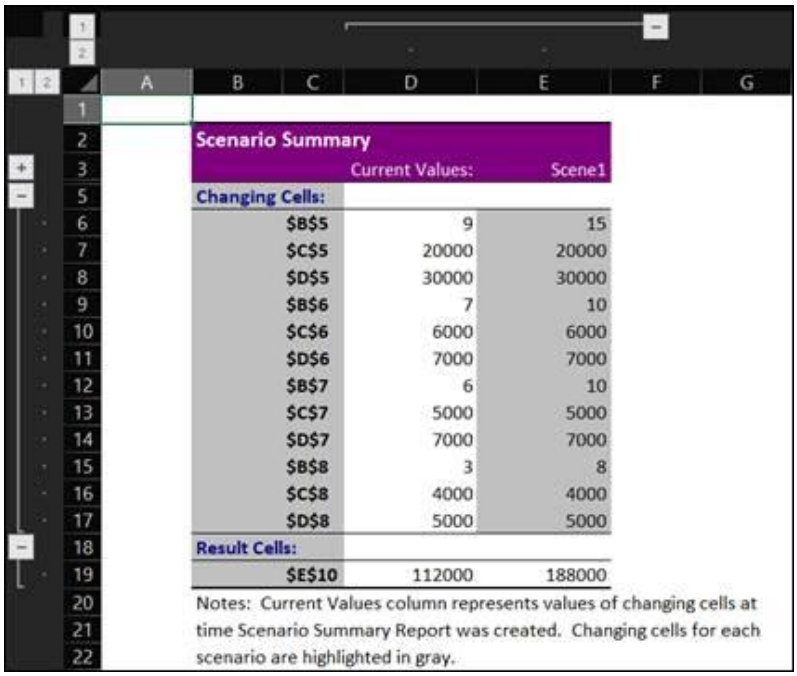
6. Click on **Add**.
7. Enter a **Scenario Name** (e.g., Scene1).
8. Select the **Changing Cells** (cells affecting profit such as Cost Price, Selling Price, or Quantity).
9. Click on **OK**.
10. Enter the values for the changing cells.



11. Click on **OK**.
12. Repeat the above steps to create multiple scenarios if required.
13. Select any scenario and click on **Show** to view the result.



14. Click on **Summary**.



Scenario Summary		
	Current Values:	Scene1
Changing Cells:		
B5	9	15
C5	20000	20000
D5	30000	30000
B6	7	10
C6	6000	6000
D6	7000	7000
B7	6	10
C7	5000	5000
D7	7000	7000
B8	3	8
C8	4000	4000
D8	5000	5000
Result Cells:		
E10	112000	188000

Notes: Current Values column represents values of changing cells at time Scenario Summary Report was created. Changing cells for each scenario are highlighted in gray.
